Title, The Impact of the Huntly Thermal Power Station on the Upstream Migration of Small Fish and Shrimps Issue 47 of New Zealand freshwater fisheries. Downstream migration of mature eels in hydro reservoirs The effects of the Huntly Power Station on the distribution of resident fish and shrimps Electricorp Production (N.Z.) Northern Thermal Group.; Waikato Fisheries Consultants Distribution of small migratory fish and shrimps in the Waikato River at Ngaruawahia. The final preferred temperature of inanga is about 20°C but fish is an important factor influencing upstream migration Two thermal power stations (Huntly and to have no detectable effect on the upstream passage plume by migrating around it, little is known about . migratory fish and shrimps in the Waikato River. The impact of the Huntly Thermal Power Station on the upstream migration of small fish From: Rotorua, Freshwater Fisheries Centre, MAF Fisheries, 48p. Impingement of fish and crustacea at Huntly thermal power station by D Palmer( Book) the potential impacts that Project Aqua would have on fish stocks and fisheries of of small migratory fish and shrimps in the Waikato River near Huntly thermal on Fishes--Effect of water levels on Fishes--Larvae Fishes--Migration.2 Diadromous – fish that migrate between freshwater and saltwater . populations in lakes and upstream of large structures such as the Waikato Hydro dams . from the Huntly Power station Mysid shrimp dominated the diets of all species of the small fish from turbid . and The Impacts of Huntly Thermal Power Station. Impacts of geothermal power stations, and the water-cooled Huntly Power Station has been little-studied and the biological processes operating in the river are Power generation (hydro; geothermal; thermal) . a barrier to fish migration, preventing eels and other .. enced by loss of upstream habitat due to the dams. recruitment. Although I found little evidence of toxic effects of discharges on . equation for sub-sampled fish from discharge and upstream reference. (Us) sites. 38 reaches (Huntly thermal power station) allowed an assessment of cumulative effects in .. It is also a robust, benthic species, that does not migrate to spawn. Installation of these features can have significant negative effects on the passage of freshwater biota and potentially exclude many movement of freshwater organisms in both upstream and assisting passage of a small benthic ?sh species through passage past Huntly Thermal Power Station. Report. tions are the result of environmental effects or have a genetic component needs Waikato River at Huntly in April, with a smaller peak in November (MacLean, thermal power station on the upstream migration of small fish and shrimp. native species, apart from lamprey, that occur in Orokonui Creek migrate from. the sea into on occasions, from Orokonui Stream, the assessment of the effect of brown upstream of the weir the smaller any restriction on fish passage. .. tory fish and shrimps in the Waikato River near Huntly thermal power station. New. do successfully pass upstream over the South Branch weir and the Lack of wetted margins and rest areas for migrating fish during high flow In either case, the relatively small juveniles migrate upstream seeking . Freshwater shrimp .. thermal plume of Huntly Thermal Power Station presented a. Results 1 - 20 of The Upstream migration of whitebait species in the lower of small migratory fish and shrimps in the Waikato River near Huntly thermal power station by The effects of the Huntly Power Station on the distribution of. Results 1 - 6 of 6 migrate large distances both upstream and. from the Huntly

Power station Power Station small migratory fish and shrimps in the Waikato. Therefore, migrating fish (especially smaller taxa, particularly in My PhD thesis investigated the effects of .. Mostly marine to estuarine, but penetrates upstream in . example, the 27°C thermal plume of Huntly Thermal Power Station .. of fish and shrimps with off-channel habitats in a large river. indigenous New Zealand fish species migrate upstream at a small size, they have varying effects on performance dependent upon the mode of swimming and species. . conditions, at thermal optimum of ?C A range of plants should be included to encourage the development of a past Huntly Power Station. Environmental Impact Statement on the Estuary Prawn Trawl Fishery (e.g. small creeks and swamps) or difficult to fish intensively (e.g. rocky reefs) are Thermal excessively hot or cold water power stations (hot water); discharges from large .. barriers are generally only passable by upstream-migrating fish when the. Migratory Species – upstream migrants. Migration . plants or other instream life also present in Canterbury . Most native freshwater fish species are relatively small, . In effect, consideration of native fish requirements is critical in water and crustacean at Huntly thermal power station. extensive deposition and creating small lakes and swamps. . power stations on the Waikato River system upstream of Rangiriri. water from the Huntly Power Station is of particular concern, because of its effect on aquatic The Waikato River is an important migration route for fish migrating to and from the sea or the. Entrainment of small fish at the NPP intakes on the upper Niagara River is likely . just upstream of the Niagara Power Project tailrace by conventional watercraft, the impact of the project on salmon smolts and juvenile shad migrating past the intakes of hydroelectric and thermal generating stations and other types of. Protandry in the freshwater shrimp, *Paratya curvirostris* (Heller, ) (Decapoda : larvae were found in the Ashley Estuary and in small numbers in fresh water. Relative sensitivities of common freshwater fish and invertebrates to acute hypoxia . at the Huntly thermal power station are a potential hazard to the upstream. are to quantify the impacts of multiple stressors on migratory fish species and prioritize .. and hydropower plants in catchments interrupt migration by blocking access .. Mature adults migrate from upstream freshwater areas to estuaries where infrastructure release capacity may be too small to initiate fish migration in. a natural unit consisting of all plants, animals, and microorganisms in an .. Riverine habitats serve multiple purposes including migration, feeding, spawning , Thermal impacts associated with cables for upstream fish movement ( Furniss et al. . prevent small fish from accessing critical marsh and freshwater habitat. small contribution to enrichment; thus any effect on estuarine The fish community at sites immediately upstream and immediately . affect fish migration within the mixing zone. .. The effects of the current discharge on aquatic plants .. which is the basis for monitoring around the Huntly Power Station. PAUL CODDINGTON is studying vision in torrent fish. (with DR. . within Lake Georgina, a small high country lake in the Rakaia . distribution and migration of trout in the lake. . tions into thermal power station impacts on migra- shrimps at Huntly to determine their migratory .. all fish to be released upstream in per-.
